(*) Estimated from the data available at the time of the last update (if not entered).

7 We indicate a zero value if the net calculated from the information that you have entered is negative.

8 The estimated spendable income is the portion that a household will spend for the consumption of goods and services from its net income.

9 The cost of housing is a % of the net salary depending on the home country (if not entered).

10 We indicate a zero value if the savings portion calculated from the information that you have entered is negative.

(**) Estimated from the data available at the time of the last update.

11 The savings portion of the home country is reported in the host country in order to maintain the same savings capacity.

12 The cost of housing used in the host country corresponds to the cost of unfurnished accommodation in the host city and whose size corresponds to the family situation entered. If unfurnished accommodation is not an option, we use a different type of housing corresponding to the situation.

14 The COLA is an allowance that compensates for the difference in cost of living between the two countries. It is calculated by multiplying the spendable income by the cost of living index.

Note: Calculations are made on the basis of a stay > 183 days and a tax residence in the host country. The only revenue sources considered are the income earned by an individual; any deductions related to a second income are not considered. The deductions and tax credits applied, if any, are those related to the family structure. These refer to only those systematically applied tax deductions and credits (optimized treatment of the tax/social situation is not included in this calculation). The calculated social contributions are the compulsory contributions of each country.

Home country: The tax year starts on 1st January and ends on 31st December. Data on taxes and social contributions were updated on 01/01/2016.

Host country: The tax year starts on 1st January and ends on 31st December. For employer social security contributions, the work accident contribution rate is 0,4% (it may vary from 0.4% to 1.2% according to the type of industry). Data on taxes and social contributions were updated on 01/01/2016.
